1. Introduction

This document provides step-by-step instructions to set up, configure, and run the BookEase Healthcare Booking Platform in a local development environment.

The platform consists of a backend API and a frontend web application.

2. Prerequisites

Ensure the following tools are installed:

- Node.js (v18 or later recommended)
- npm
- PostgreSQL
- Git

3. Project Structure

```
bookease-api/  
├── prisma/  
├── src/  
├── bookease-frontend/  
└── README.md
```

- Backend: `bookease-api/`
- Frontend: `bookease-frontend/`

4. Clone the Repository

```
git clone <your-repository-url>  
cd bookease-api
```

5. Installation Steps

Clone the repository and install dependencies for both backend and frontend applications.

5.1 Backend Installation

```
npm install
```

5.2 Frontend Installation

```
cd bookease-frontend  
npm install
```

Return to the backend root directory when running backend commands:

```
cd ..
```

6. Environment Variables

6.1 Backend Environment Configuration

- Create a `.env` file in the project root directory:

```
DATABASE_URL="postgresql://<username>:<password>@localhost:5432/<database_name>"  
JWT_SECRET="<your-secure-jwt-secret>"  
PORT=3000
```

6.2 Frontend Environment Configuration

- Create a `.env.local` file inside the bookease-frontend/ directory:

```
NEXT_PUBLIC_API_URL="http://localhost:3000"
```

7. Database Setup

7.1 Generate Prisma Client

```
npx prisma generate
```

7.2 Apply Migrations

```
npx prisma migrate deploy
```

For development:

```
npx prisma migrate dev
```

7.3 Optional: Prisma Studio

```
npx prisma studio
```

8. Running the Application

8.1 Start Backend Server

```
npm run start:dev
```

- Backend runs at: <http://localhost:3000>

8.2 Start Frontend Application

```
cd bookease-frontend  
npm run dev
```

- Frontend runs at: <http://localhost:3001>

9. API Documentation

- Swagger documentation is available at: <http://localhost:3000/api>

10. Key Features to Verify

After running the system, verify:

- User registration and login
- Service browsing
- Booking creation (guest & user)
- Booking management
- Admin service management
- Booking status updates

11. Build Commands

Backend

```
npm run build
```

Frontend

```
cd bookease-frontend  
npm run build
```

12. Conclusion

This guide outlines the complete process to set up and run the BookEase Healthcare Booking Platform. Following these steps ensures a successful local development setup and demonstrates full-stack application functionality.

13. Further Reading

For additional context on the project, its architecture, and requirements, refer to the project's GitHub repository README:
